

Prices: opsi-extensions in cofunding-projects

opsi is open source and free of license fees.

Nevertheless the development of new opsi modules is expensive. So uib invented the co-financing process as an instrument to finance the open source development. The following modules are developed as co-funding projects. That means, that these extensions are only available for those customers who pay a contribution to the project costs.

As soon as the development of a co-funding project is refinanced, the component becomes part of the free opsi-distribution and can be used free of charge. It will be open source then (as long as not prevented by technical reasons).

There is no dependency between the opsi-extensions, except the WAN-extension, that has to be used together with the MySQL-Backend.

opsi-modules	
Nagios Connector*	Monitoring of opsi-server functionality, opsi rollouts, opsi clients
License Management*	Management of software licenses
Local Image*	Quick client restore of student computers Restricted sale. Please ask for an offer
MySQL-Backend*	Increases performance on large installation
WAN Extension*	MySQL-Backend is required. This extension enables to save bandwidth on download for installation data per https/WebDAV and stores the data locally
Linux Agent**	Client and configuration management for Linux systems. Permanent use of the opsi-linux-client-agent
Scalability I*	Increases performance by using multiple processes
UEFI Support*	Support of UEFI boot and GPT partition tables
WIM-Capture*	Capture of Windows installation incl. Hotfixes, software and configuration
User-Roles*	The client visibility can be configured specifically per depot
Directory Connector* ***	Transfer of client data from an LDAP-enabled directory service (i.e. Active Directory or Samba 4) to opsi

*It counts all clients that are administrated with opsi

**It counts the linux clients

***Subscription for UCS-Installations on demand
