1. Why should I sign a support and maintenance contract?

The characteristics of every desktop management software (like opsi) are:

- It is used by system admins with a limited amount of time and money
- The learning curve takes several days
- Huge time saving potential when in operation
- Critical when breakdowns and malfunctions occur
- The software system requires maintenance to stay up-to-date for distributing recent software packages
- The software system requires maintenance to support new operating systems (installation as well as software distribution)
- The software system requires maintenance to integrate the latest hardware (new or updated drivers)

The resulting arguments are:

- To procure a software distribution system might be free of charge – the installation, introduction and operation of the system never is.
- The most economical solution for the introduction is to provide workshops and training for the administrators, covering the installation and operation of opsi
- The most economical solution for a continuous operation of opsi is to sign a support and maintenance contract
